Tutorial : Mitosis

19 Oct 2026

Identify the reproduction mode

__ _____: the asexual process of dividing the nucleus & the *genetic material* of a *somatic* (body) cell.

□ Starts with one *diploid* cell & ends with _____ genetically *identical* ___ _ cells.

□ Mitosis consists of _____ different phases:

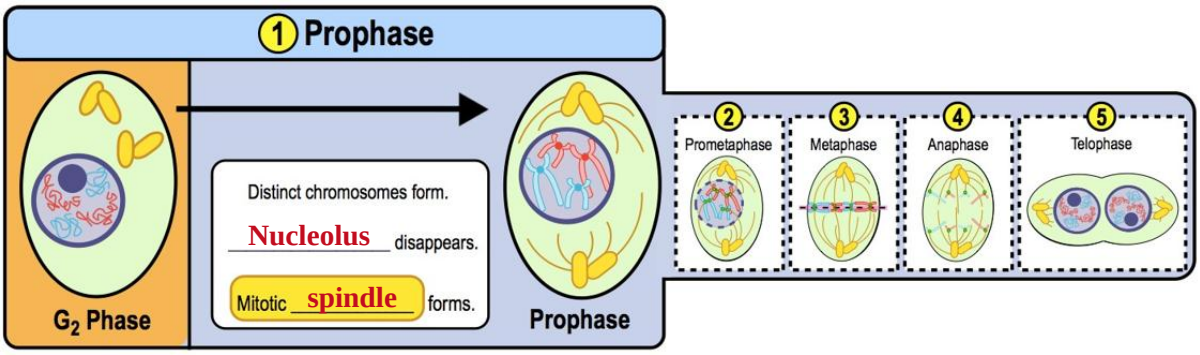

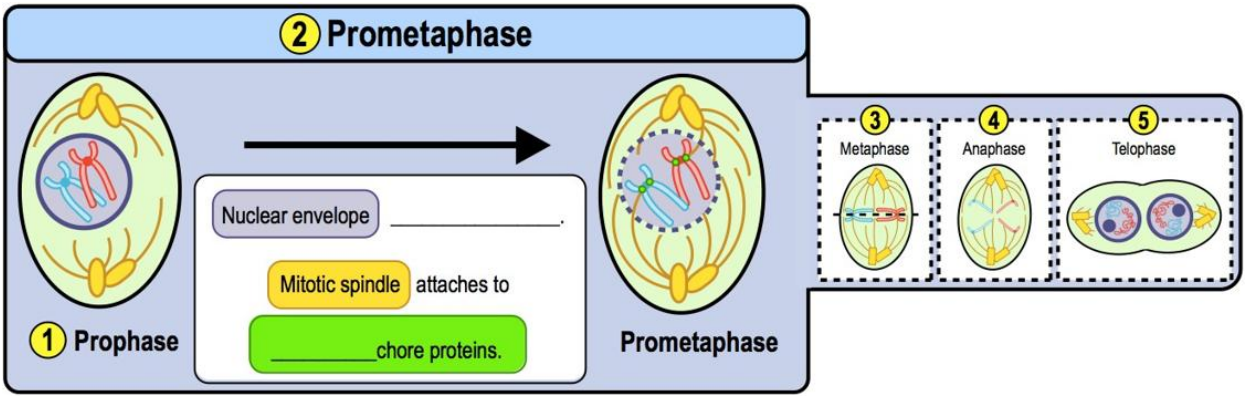

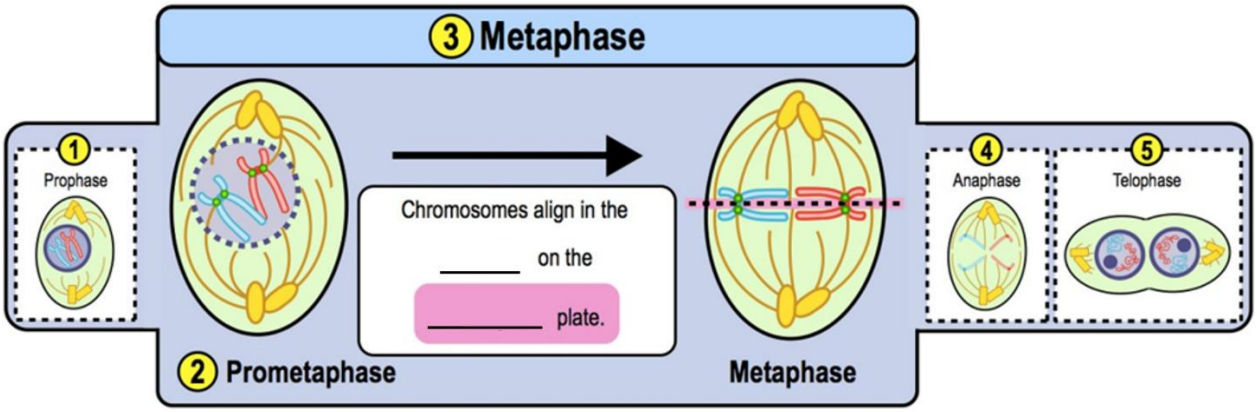

__ **Mitosis** : the asexual process of dividing the nucleus & the *genetic material* of a *somatic* (body) cell.

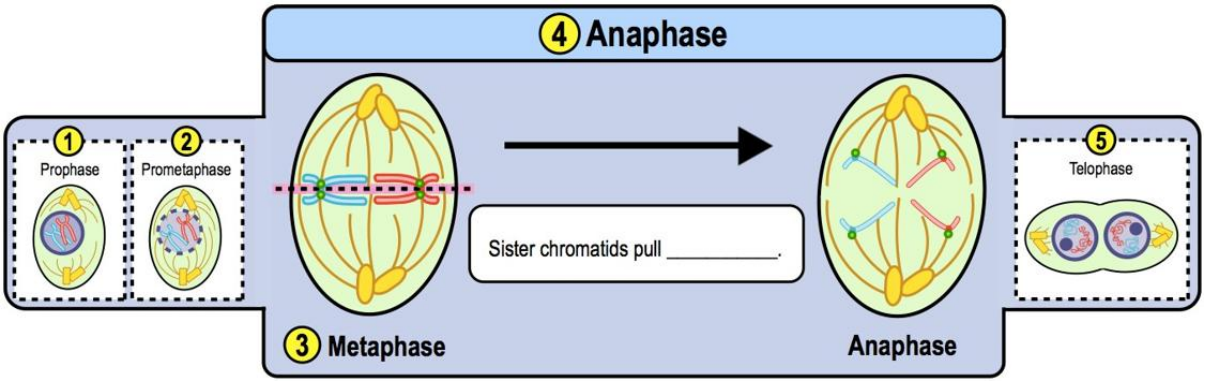

□ Starts with one *diploid* cell & ends with **two** genetically *identical* **daughter** cells.

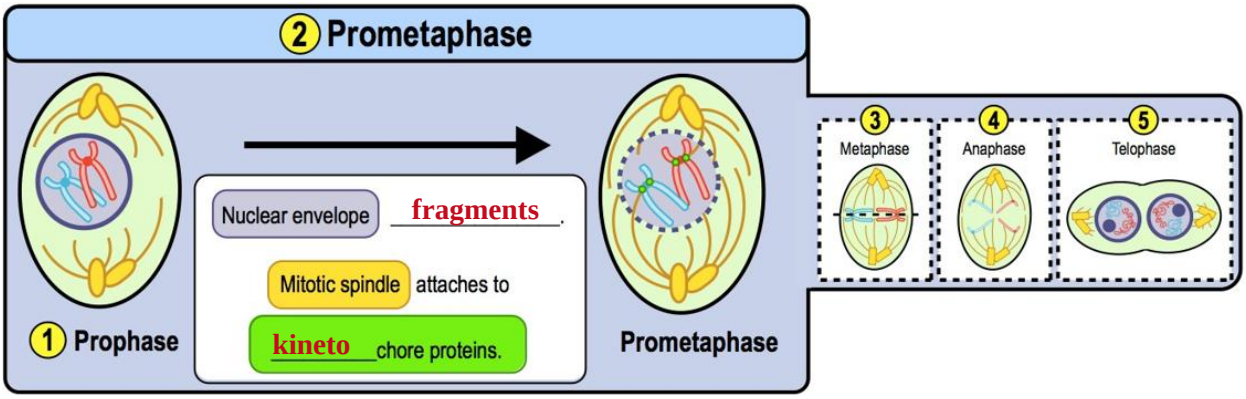

□ Mitosis consists of **five** different phases:

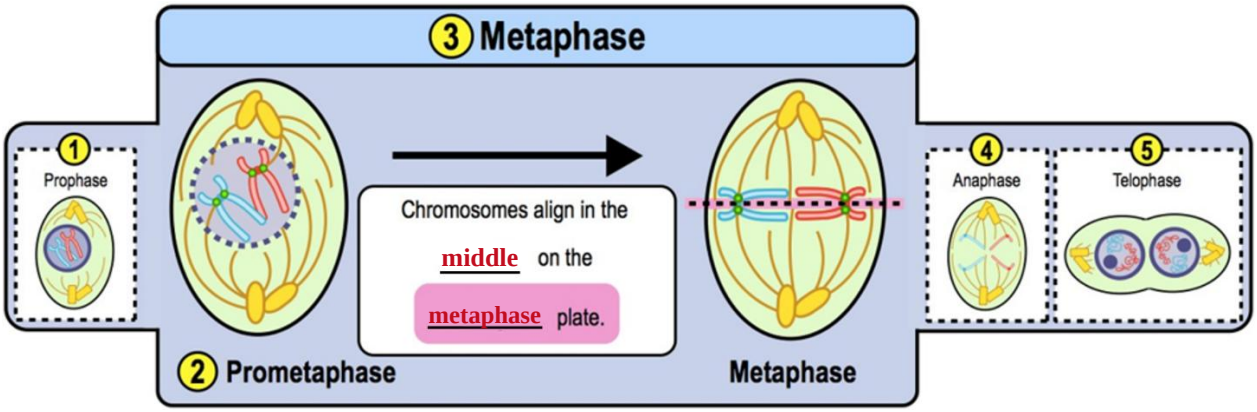

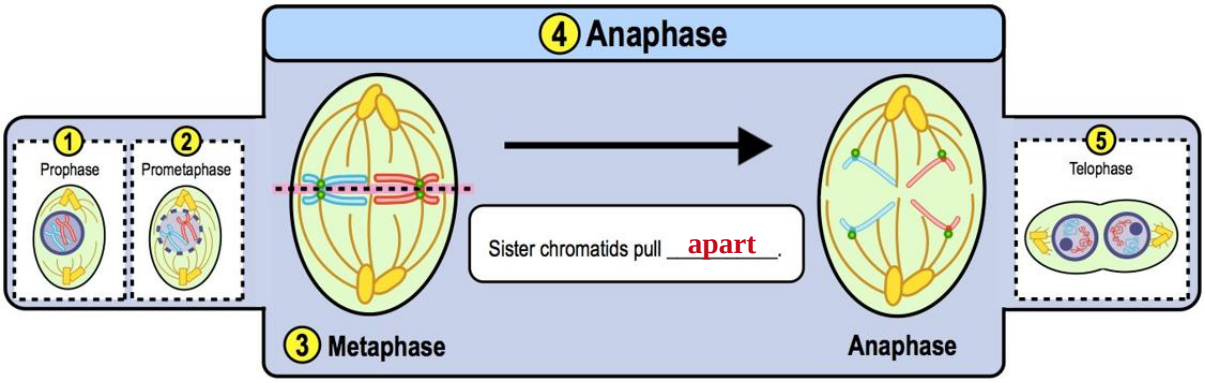

2 Prometaphase
Nuclear envelope _____.
Mitotic spindle attaches to
_____chore proteins.
1 Prophase
Prometaphase
3 Metaphase
4 Anaphase
5 Telophase

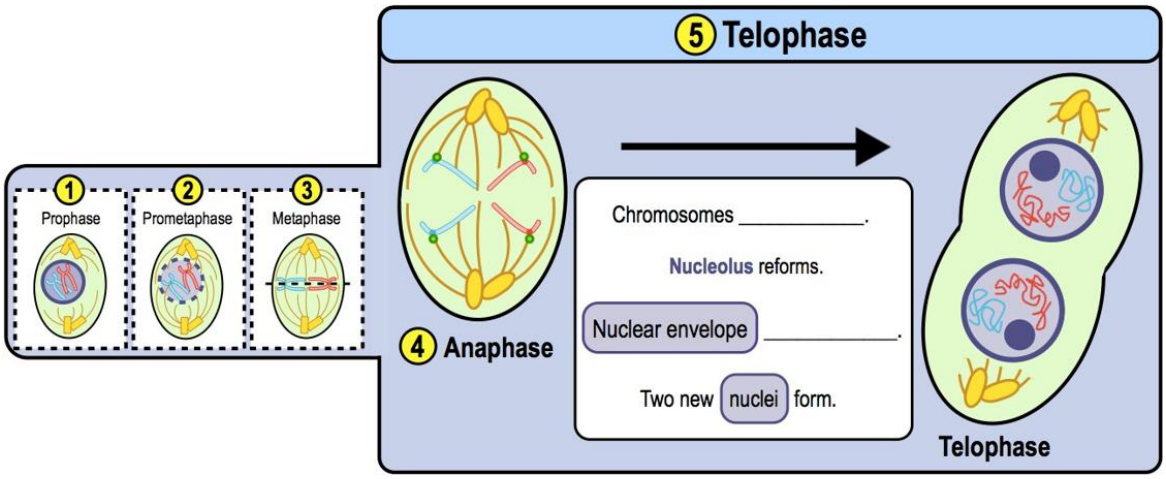

3 Metaphase
1 Prophase
Chromosomes align in the
_____ on the
_____ plate.
2 Prometaphase
Metaphase
4 Anaphase
5 Telophase

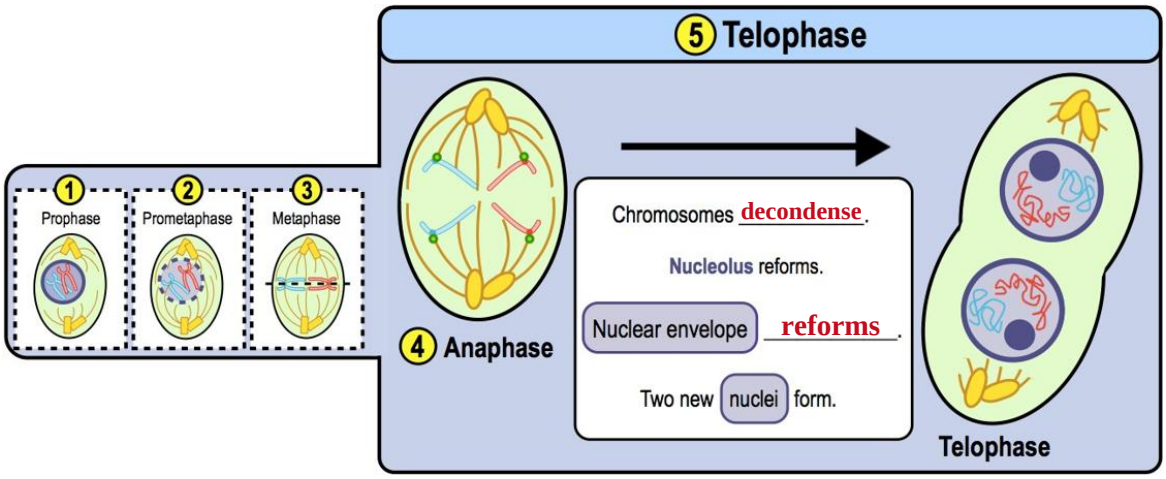

4 Anaphase
1 Prophase
2 Prometaphase
Sister chromatids pull _____.
3 Metaphase
Anaphase
5 Telophase

2 Prometaphase
1 Prophase
Nuclear envelope fragments.
Mitotic spindle attaches to
kineto chore proteins.
Prometaphase
3 Metaphase
4 Anaphase
5 Telophase

3 Metaphase
1 Prophase
2 Prometaphase
Chromosomes align in the
middle on the
metaphase plate.
Metaphase
4 Anaphase
5 Telophase

4 Anaphase
1 Prophase
2 Prometaphase
3 Metaphase
Sister chromatids pull apart.
Anaphase
5 Telophase

1
Prophase
2
Prometaphase
3
Metaphase
4 Anaphase
5 Telophase
Chromosomes _____.
Nucleolus reforms.
Nuclear envelope _____.
Two new nuclei form.
Telophase

1
Prophase
2
Prometaphase
3
Metaphase
4 Anaphase
5 Telophase
Chromosomes decondense.
Nucleolus reforms.
Nuclear envelope reforms.
Two new nuclei form.
Telophase
